

Zuoce Litchi Milk

Last Update: 05/25/2025

Zuoce Litchi Milk		
Switch Type: Tactile		Unknown
27	/35	Push Feel
18	/25	Wobble
5	/10	Sound
12	/20	Context
6	/10	Other
68	/100	Total

Notes

Push Feel

The Zuoce Litchi Milk are just a touch under medium strength tactiles with a snappy, round tactile bump that starts right at the beginning of the downstroke but develops in such a way that it feels slightly more 'into' the stroke than at the top. Once you pass this bump, you're sucked directly into a deep, rounded bottoming out that has an almost gravitational pull that greatly shortens the time spent in the post bump linear region of these switches. While technically interesting, the Litchi Milks are also a bit scratchy and inconsistent with scratch and all of these features across the batch of switches that I received.

Wobble

The Zuoce Litchi Milk switches have an average amount of equal magnitude N/S and E/W direction stem wobble. It's not likely to bother most users but some who are more sensitive to wobble might take issue with it.

Sound

At normal typing speeds, the Litchi Milk switches are a medium loud with a crisp and snappy tone that is delivered by only their tactile bump and contrasted with a deeper, more bass heavy bottom out below it. However, at any higher actuation speeds these two tones begin to war with each other a bit and are both equally drowned out by inconsistent, sharper tones that pop up from stroke to stroke.

Context

Despite being priced at \$0.30 per switch, the Litchi Milk switches suffered the same fate as other Zuoce switches and never really gained the same traction with western audiences that it did with the east. Despite some technical flaws, these are not bad at their price point.

Other

While \$0.30 tactile switches are always an interesting gamble, these switches actually are certainly noticeably different in their feeling than most tactiles even if a bit flawed in execution.
