

Huano Clicky White

Last Update: 10/08/2023

Huano Clicky White		
Switch Type: Clicky		Huano
22	/35	Push Feel
15	/25	Wobble
4	/10	Sound
8	/20	Context
4	/10	Other
53	/100	Total

Notes

Push Feel

While not the most incoherent of the click jacket mechanism clicky switches which I've tried in my times, these still have a noticeable 'staging' to their mechanism in which the pre-click, clicking, and post-click all have distinctive regions of scratchy, plasticky chaos associated with them. The only real saving grace with the push feeling of these switches is that the housings are solid enough that there isn't really much of a bottoming or topping out that is noticeable behind their clicky mechanism.

Wobble

There is a problematic amount of stem wobble in the N/S direction and a much lesser, but still noticeable amount in the E/W direction. This is definitely likely to bother a good few keyboard enthusiasts even if they aren't all that picky about stem wobble.

Sound

The Huano Clicky whites have a noticeable sharpness to their click jacket mechanism which is distinctive from other clickies of the sort while still being quite grating on the ears. Throw in some scratchiness and a general high pitched metal ping that fills up the background sound of these switches and you're left with a classic reminder of why click jacket clickies may as well be an affront to whatever deity you believe in, assuming that you do.

Context

While not priced all that unreasonably and very likely used in OEM applications, there's not much excuse for these switches being made in 2023. Huano especially can do better given the successes that they've had with linears and tactiles among their more premium, custom releases. I mean just put any lubrication in this switch at least, please. Give it a fighting chance.

Other

For all the shit just given to Huano a few lines ago, at least they are *attempting* to offer a clicky switch and doing so with seemingly new molds...
