6	/10	Other
77	/100	Total

Notes

Push Feel

These self-described 'lightly' tactile switches are actually pretty squarely situated in the rarely filled valley between the lightest tactile switches and true medium strength ones. With an early in downstroke pump, the Light Tactiles are started with a softened punch that is quite well accented by the firm, cushioned bottoming out onto nylon housings that these switches have. In spite of being a bit scratchy and not all that well lubed from the factory, it is quite leathery in feeling and gives an almost desirable characteristic feel that would otherwise be lacking.

Wobble

Slightly better than the overall average, the Wuque Light Tactiles have a minor amount of equal magnitude N/S and E/W direction stem wobble. It's very likely that this will not bother the vast majority of users out there.

Sound

While these switches are overall strong performers in their push feel, their sound is where they really steal the show. Deep, bassy tones with soft, leathery sounding accents from the tactile bump and housing collisions makes these a very satisfying light tactile switch to listen to in spite of being a touch inconsistent in overall pitch from switch to switch.

Context

Priced at a great price point of approximately \$0.40 per switch depending on where they are purchased from, these switches have widespread accessibility and a decent amount of original vendor support behind them from Wuque Studio. All things considered, though, these hardly have as much community recognition and marketing force behind them to turn them into the widely popular success that they could be.

Other

Wuque is doing great with these and many of their other switches to fill voids in standard switch offerings, though their naming and presentation makes them a touch hard to differentiate...
