

Tecsee Volcano Linear

Last Update: 04/06/2025

Tecsee Volcano Linear		
Switch Type: Linear		Tecsee
27	/35	Push Feel
15	/25	Wobble
6	/10	Sound
10	/20	Context
4	/10	Other
62	/100	Total

Notes

Push Feel

These medium weight Tecsee linears are listed as having a 63.5 g bottom out weight and full stem travel distance, though admittedly their big marketing point is actuating only 1.5 mm into the full 4.0 mm stroke. Without this key feature being appreciable in in hand testing, these switches may as well just be any other linear switch. The Volcanos are smoothly scratchy with a subtle sandpaper tone, firm but slightly pointed bottom outs, and well balanced, equally as firm topping outs.

Wobble

For a switch made by Tecsee in late 2024/early 2025 with ostensibly a new stem mold, these switches have a disappointing amount of N/S and E/W direction stem wobble that is equal in both directions. I imagine there would be quite a few people not too okay with this...

Sound

The most redeeming characteristic of the Tecsee Volcano Linear switches is their sound – one which has really none of the scratchy tones noted by the push feeling above but is instead driven entirely by the housing collisions. Medium to medium quiet in volume depending on typing speeds, these switches have housing collisions that are well balanced, flat in pitch, and ever so slightly rounded and more full bodied than not.

Context

While these seem to be priced fairly cheaply in the few places that they exist to be purchased, these may as well not exist when it comes to marketing. Tecsee more or less just tossed these switches out there after announcing them almost a year earlier under a different name (Flames) and they just don't seem to care about pushing them or their neat features forward.

Other

While the idea of a full stem travel, early actuating linear switch is neat on the surface, it feels very anachronistic with what the switch market wants or is driven by today...
