Notes

Push Feel

Utilizing LICHIEUX's mid-stem silencing methodology, these Chosfox-branded short throw silent linears are firm and compact feeling with a solid, ever so slightly dampened bottoming out that evades the mushiness typically associated with traditional silencing mechanisms. As for the stroke, the switches are smooth but retain some subtle background graininess to their feeling that can be felt through in some of the switches in the batch that I received.

Wobble

Almost entirely in the N/S direction, there is hardly any stem wobble whatsoever in the Chosfox Summer Lime switches. Its no doubt to me that manufacturers across the board are getting closer to perfecting stem wobble as these are not only good on a per-switch basis but on a batch wide scale as well when considering their variability.

Sound

In terms of being silent linear switches, these are absolutely fantastic at dampening sound and hardly produce any volume at all throughout their strokes. That being said, there is a sort of a medium-pitched 'ploppiness' to their housing collisions, which will subtle, does become apparent and especially at faster actuation speeds.

Context

Coming closely on the heels of the LICHIEUX Lucy switches which gained a lot of attention and adoration from the community at large, the Chosfox Summer Limes have been a slept on but well-priced alternative sharing similar characteristics. While their lack of general community awareness is low, their potential for longevity being branded by the company selling is high.

Other

Any further continuation of the LICHIEUX brand by eastern or western sellers is worth awarding in my books. However, I can only hope that they will continue to improve not only this relationship in time, but also the quality of switches being released.
