6	/10	Other
68	/100	Total

Notes

Push Feel

While previous TTC switches have been notorious for poor factory lubrication, the Gold Pinks are surprisingly smooth with only the tiniest amount of scratch. The only thing stopping this score from being higher is the light spring weight contributing to a hollow and thin bottom and topping out feeling.

Wobble

With no wobble in the top housing at all, this switch has a fairly reasonable amount of stem wobble in both N/S and E/W direction for TTC. Equal in magnitude in both directions, these might be noticeable with keycaps on depending on the user and/or profile.

Sound

With the biggest negative points being a thin and plasticky topping and bottoming out noise to match the push feel, there is very little other noise for these linear switches, with the scratch disappearing to the ear altogether.

Context

With little to no marketing westward for these switches, these strikingly different looking switches with the yellow bottoms and pink dustproof stems were the 'hit the ground running' start of TTC's modern push improvement. (And it really does help these stick in the memory)

Other

Aside the lack of PCB mount support and odd 'LED Bubble' choice, these will likely stick in my head for quite some time as a 'sleeper' amongst the lightweight linear switch options.
