Notes

Push Feel

Aiming to be an improved and updated light tactile take on the popular Blueberry Chifofn switches, the Invokeys Goji Reserves are very light tactiles with a rolling, slowly unfurling bump that softly shuffles by about a third of a way into the downstroke is bookended on either end by firm, slight muted housing collisions. With a decent amount of factory lubing these switches also feel smooth, but not overly so, and maintain a decent amount of the POK/POM material interface from their stem and housing material choices.

Wobble

Despite being very similar to other Reserve line switches in terms of their mold designs, the Goji Reserve switches have a slightly greater than average amount of N/S and E/W direction stem wobble.

Sound

While the tactile bump of the Goji Reserves could have its sound similarly described as in the push feeling notes above, there is the occasional 'pop' across some switches and at higher actuation speeds that make these a little less than subtle on the ears. Furthermore, despite being smooth switches in hand these paradoxically carry a bit of shuffling scratchy sound to them that makes them sound much less smooth than they actually feel.

Context

As a spiritual successor to the Blueberry Chiffons and a continuation of the popular Reserve line of switches, the Gojis have all the historical backing, marketing, and broader market availability at a \$0.50 per switch price point that makes them some of the most attractive light tactiles on the market, and with a bit of added flair in their design as well.

Other

While the Goji Reserves do fill a niche that is often uncatered to and demonstrated notable improvements over their inspiration, they are still a tiny bit rough around the finer edges.
