

## Spring Switch

Last Update: 12/17/2023

Spring Switch		
Switch Type: Linear		BSUN
28	/35	Push Feel
19	/25	Wobble
6	/10	Sound
9	/20	Context
6	/10	Other
68	/100	<b>Total</b>

### Notes

#### Push Feel

These 45g bottom out linear switches with all POM housings and LY stems are effectively no more than a 'throw away custom' from BSUN in 2023 and yet demonstrate all of the improvements that they've made since their resurgence this year. Good but not perfect factory lubing with a set of well balanced housing collisions at normal typing speeds, these Spring switches perform pretty damn well at normal typing speeds and a bit weaker at higher speeds.

#### Wobble

There is a moderate but not particularly problematic amount of equal magnitude N/S and E/W direction stem wobble in the BSUN Spring Switches that is not likely to bother many except those that are particularly sensitive to stem wobble.

#### Sound

At normal typing speeds, these switches are a medium-light volume switch that straddles whatever the dead middle line between high pitched and low pitched is with only a small amount of scratch underpinning this sound. At higher actuation speeds these pitch upwards and get a bit louder, losing a bit of their meek and unimposing demeanor, though not to a point where they are unusable.

#### Context

Good luck finding these switches. Available in very few places for a very limited time, the only saving grace for them is their cheap as all hell price point between \$0.38-0.45 per switch depending on where they are bought from. I doubt very few in the western hobby have these in their keyboards, though I imagine they'll be much more fondly remembered in China.

#### Other

With little support, pricing, life span, and information about them out there, I can't help but think that BSUN just made these as a single time offering without much thought. If this is how their performance is with minimal care, though, then BSUN really is making a resurgence...
