

## Greetech Razer Yellow

Last Update: 01/16/2022 (V2)

Greetech Razer Yellow		
Switch Type: Linear		Greetech
23	/35	Push Feel
13	/25	Wobble
5	/10	Sound
7	/20	Context
4	/10	Other
52	/100	<b>Total</b>

### Notes

#### Push Feel

Greetech Razer Yellows are certainly the best among all of the Razer switches that were produced in their short stint with Greetech, even with their similar issues. While they still do feature that same constant, overbearing amount of scratch with them, they still do have a pair of decently firm, thick feeling housing collisions that are effectively half the feeling of these linears.

#### Wobble

These switches have a nearly completely circular, large amount of stem wobble in the N/S and E/W directions like the other Greetech Razer switches. In addition, there's clear evidence of poor mold tolerances as these switches also have inconsistent top housing budge in the E/W direction across a batch of switches.

#### Sound

While the sound of these Yellows pretty closely matches that of the 'Push Feel' notes above, the overall loudness and prevalence of scratch overrides even the decently present spring ping that is characteristic of these switches in stock form.

#### Context

Available as the least popular option among Razer boards that these were built with around 2015, these are by far the least known Greetech Razer switches. That being said, while they were thus a slight bit better than the others in terms of price per performance, Greetech's quick jump to Kaihua in 2016 shows well that these were bad even by *Razer's* standards.

#### Other

While I think that these are decently competitive to other OEM brand switches at the time as a perhaps slightly more lighter or 'airy' linear switch, their limited range of adoption and refusal to provide these as out-of-board addons by Razer will forever limit these to a Razer historical footnote rather than an interesting switch from this era.
