

TTC Razer Dustproof Orange

Last Update: 10/09/2022

TTC Razer Dustproof Orange		
Switch Type: Tactile		TTC
16	/35	Push Feel
14	/25	Wobble
4	/10	Sound
7	/20	Context
4	/10	Other
45	/100	Total

Notes

Push Feel

While the Orange tactiles that Razer offer are almost certainly significantly less popular than their Green clickies, they really abandoned all hope of making these decent with TTC. Even though there is a minorly firm bottoming out and characteristic low strength tactile bump that is expected of these switches, the pure amount of large grain, inconsistent scratch across the strokes of these switches is atrocious to the point of nearly drowning out the tactile bump.

Wobble

Much like their release duos in the Dustproof Yellows and Greens from TTC, the stem wobble on these switches isn't great, but very much in line with poor performing offerings from more custom-oriented switch manufacturers. That being said, though, side to side E/W top housing wobble is really hard to overlook for the sake of gamer aesthetics.

Sound

It's just scratch. It's all scratch. Even the scratch somehow seems to drown out the thinner topping out that becomes higher pitched at faster activation speeds. I mean at the bare least, there isn't any sort of spring ping to really make this more grating on the ears.

Context

While I haven't necessarily scored nor collected all variations of Razer's switches over their generations of playing manufacturer roulette, I refuse to believe that these were even remotely tested prior to being put into products. There's not a single person on Earth who would try these switches and *not* comment on just how purely scratchy these are. It's incredible, really.

Other

The only saving graces that TTC really imparts on their Dustproof line of offerings for Razer is that they have better LED support for a very RGB-heavy brand aesthetic and a custom set of nameplates so we know exactly who to blame for approving such a horrendous tactile switch.
