

Greetech Razer Orange

Last Update: 01/16/2022 (V2)

Greetech Razer Orange		
Switch Type: Tactile		Greetech
19	/35	Push Feel
13	/25	Wobble
3	/10	Sound
7	/20	Context
4	/10	Other
46	/100	Total

Notes

Push Feel

Featuring an extremely light tactile bump even below that of the Cherry MX Brown range of tactility, this fairly mid-set tactile bump is altogether not too bad on its own. However, a lack of consistency in this tactile bump across switches, mixed with that of a competitively strong, grainy scratch feeling really makes for a poor stock switch experience.

Wobble

Much like the other two Razer switches which were produced by Greetech at the time, these switches have a large, nearly circular amount of stem wobble in the N/S and E/W direction with slight top housing budge in the E/W direction that make for an overall poorly tolerance on switches.

Sound

Due to the relatively small presence of the tactile bump, the predominant sounds in this switch are scratch, spring ping, and an inconsistent crunching sound. The only real saving grace of these switches are their fairly solid housings which give a bit of a thick and firm topping and bottoming out sound to them.

Context

Being the lesser popular option behind Razer's Green switches from Greetech, these saw even less prevalence in the short run that Greetech had with Razer in 2015. Given the poor performance and quick switch to Kaihua as a manufacturer, these clearly didn't stand up in terms of cost per performance even to Razer, who is notoriously cheap with their switches.

Other

While it is relatively neat that Razer sought out to emulate Cherry MX Browns which were otherwise alone in the light tactile field at the time, the general OEM style in which Razer has effectively limited their adoption forever and will leave these a footnote to history forever.
