

Strawberry Jelly V2

Last Update: 06/05/2022

Strawberry Jelly V2		
Switch Type: Linear		Huano
24	/35	Push Feel
21	/25	Wobble
4	/10	Sound
11	/20	Context
4	/10	Other
64	/100	Total

Notes

Push Feel

While this is almost certainly one of the lowest ratings I've ever given a pretty flawlessly smooth linear switch, the 'everything else besides smoothness' really justifies it. The Strawberry Jelly V2s have a pair of extremely thin, pointed, and sharp housing collisions that are balanced and rather noticeably accentuating by a pingy *feeling* from the spring as well.

Wobble

The single point of performance that really surprises me about the Strawberry Jelly V2s, much like that of many modern, custom Huano switches is simply just how free from stem wobble they are. With hardly any stem wobble in the N/S direction and an even lesser amount in the E/W direction, this wobble is truly significantly better than this switch deserves.

Sound

While the ping-like feeling of the spring noted above in the 'Push Feel' section isn't well emulated in the sound, the housing collisions become simply that much more noticeable in their features. At higher actuation speeds, as well, the thinness and sharpness only further intensify well beyond what I think many people who like high-pitched sounding switches would enjoy.

Context

The biggest selling point regarding the Strawberry Jelly V2s, plain and simply, comes down to their absolute bargain-bin price of around ~\$0.40 per switch at the time of their release. While they will very soon be outpaced by further iterations of Strawberry Jelly switches and/or other custom Huano releases, in the brief slice of time they are relevant in the community's mind they'll be hard to beat as thin, high-pitched budget linear switches.

Other

While I do applaud Huano for their continuation in both modern switches as well as iterating upon previous releases, I don't entirely think that the Strawberry Jelly line is what they should be continuing. That being said, there's an incredible amount of improvement yet V3 switches.
