

Zeal Clickiez 75g. (Tactile)

Last Update: 07/10/2022

Zeal Clickiez 75g		
Switch Type: Tactile		Gateron
28	/35	Push Feel
20	/25	Wobble
7	/10	Sound
15	/20	Context
8	/10	Other
78	/100	Total

Notes

Push Feel

The Tactile mode 75g Clickiez switches punch with the force of a tactile bump unlike anything I've felt amongst even 'high tactility' switches. Starting at the absolute top of the downstroke, the immediate 110-120g, peak force leads to a tactile bump that feels as if it occupies the entirety of the downstroke while only touching a fraction of it. If the housing materials were slightly better, though, and there was a lot less scratch in the click leaf, this might honestly be one of the best highly tactile switches of all time.

Wobble

While there wasn't much wobble in either the Clicky or the Linear modes already, the increased contact between the stem and the click leaf in the Tactile configuration only further shaves off N/S and E/W stem wobble. It could, however, still be just a touch bit better than it is.

Sound

Coming in like a much more toned-down version of the Clicky mode of the Clickiez, even the Tactile mode sounds like a normal clicky switch by comparison. Loud, sharp at the top, and rounded with a complex undertone in a way that many tactile switches in the MX footprint wish they could be but can't quite nail. Same points still apply here though for scratch as noted above in the 'Push Feel' section.

Context

Much like the Clicky mode of these switches, the Clickiez in Tactile mode demonstrate a complexity in feeling and design that is truly noteworthy and experience that many heavy tactile fans would enjoy. That being said, though, the price for the interchangeability gimmick is just hard to swallow when you accept how good these could be as standalone tactiles.

Other

Historical in design. Unique in execution. Punch with an insane force. These are an experience that any tactile fan should get to try at least once, so long as their fingers can manage it.
