

Chosfox Hanami Dango Green

Last Update: 05/21/2023

Chosfox Hanami Dango Green		
Switch Type: Tactile		Durock/JWK
25	/35	Push Feel
23	/25	Wobble
5	/10	Sound
14	/20	Context
6	/10	Other
73	/100	Total

Notes

Push Feel

Coming in with a standard 67g bottom out spring and a slightly stronger than medium tactile bump located only a fraction of the way into the downstroke, the Dango Greens are very much an ‘appeals to all’ type tactile switch on paper. While in reality they do very much hit those notes with decent Durock/JWK factory lube application, inconsistencies across the batch with a pingy feeling and weird extra pingy bottoming out make for an odd experience outside of the readily appealing tactile bump.

Wobble

The prideful marketing point of featuring ‘JWK’s newest molds’ in the Hanami Dango switches is best represented in the completely absent N/S stem wobble in the Greens. While there is a touch of E/W stem wobble, the wobble overall is quite competitive with most switches on the market today, and especially those from Durock/JWK.

Sound

The noted inconsistencies with respect to a pingy like bottoming out in the push feeling is only further amplified by a pingy bottoming out sound in the Hanami Dango Greens which is accented by occasional metallic spring pings. At the least, the tactile bump and linear post-bump regions are smooth enough as to not bring any scratch noise into the mix too.

Context

Being branded with and ostensibly solely designed for sale by Chosfox, the Hanami Dango Greens are definitely among the best performance per price point (\$0.50/switch) of the Chosfox-exclusive switches to date when they are good. The noted inconsistencies across a batch, however, is likely going to deter these from being as successful as they could.

Other

Introduced into the mainstream by smaller, newer manufacturers first, it’s a good sight to see Durock/JWK still agile enough to keep up molds with these updated LED condenser designs.
