

## Hexin Workshop Bamboo Green (60g)

Last Update: 08/15/2020

Hexin Bamboo Green (60g)		
25	/35	Push Feel
15	/25	Wobble
7	/10	Sound
12	/20	Context
5	/10	Other
64	/100	<b>Total</b>

### Notes

#### Push Feel

While the tactile bump sits in a mid-ground in terms of force, it is awfully 'back heavy' and feels quite light on the downstroke in quite an odd fashion. This, as well as its relatively scratchy ride to a not-quite-bottom out due to the extended central pole really hurts the overall feeling of this switch.

#### Wobble

The most noticeable wobble comes from the N/S stem wobble, which is significantly greater than the already high E/W stem wobble, detracting from this score. Top housing wobble is non-existent, though.

#### Sound

The snappy tactile bump followed up by the higher pitched yet flat bottoming out noise makes for a unique sound signature in a tactile. May be worthwhile if one desires a lighter toned or higher pitched tactile switch.

#### Context

The relative lack of marketing surrounding these switches as well as their quick appearance did no favors for them, though the lineup alongside Everglide switches does pitch an interesting curveball from that family of switches which is much more known for its linears.

#### Other

The two different initial weight offerings of 60g and 65g were not both fulfilled by the Everglide store, which is a shame given the relatively unique waiting of the 65g spring. Otherwise, a very pretty colored switch and great for components for a themed build.
