

Gazzew U4 Boba 68g (Sample)

Last Update: 08/15/2020

Gazzew Boba U4 (68g)		
28	/35	Push Feel
24	/25	Wobble
9	/10	Sound
15	/20	Context
9	/10	Other
85	/100	Total

Notes

Push Feel

The biggest detractors from this score come from the not-as-strong tactile bump as well as the minor post travel linear section that is noticeable at slower speeds. Overall, though, quite smooth and consistent with little variation from expectation due to scratch.

Wobble

Both the stem and top housing wobble are skirting the lines of manufacturing perfection. The general usability of Gazzew's top housings outside of just Outemu stuff, historically, lends support to this score.

Sound

With only a minor deduction due to a consistent scratch noise that may become more noticeable when placed into a full build that isn't proofed for sound, these switches really do justice to the 'silent' descriptor in 'silent tactiles.'

Context

Gazzew's unending desire to provide the best in DIY switches contributes a large part to this score, as it is the latest installment of his works. The biggest reason this score isn't higher is due to the chances of him outclassing some of the lesser features in this switch all too soon.

Other

With a sleek new look and scheme, as well as some mystery surrounding the material of the switches, these newly branded 'Gazzew' switches absolutely pop and cement themselves as a strong statement piece in the modern switch market.
