

## Geon Lucifer HE

Last Update: 05/04/2025

### Geon Lucifer HE

Switch Type: Linear		Grain Gold
29	/35	Push Feel
17	/25	Wobble
7	/10	Sound
14	/20	Context
7	/10	Other
74	/100	<b>Total</b>

### Notes

#### Push Feel

Manufactured by Grain Gold, one of the leaders in the modern, MX Hall Effect switch space, the Geon Lucifer HE switches are fairly light linear switches with solid performance right out of the box. Throughout the entirety of their downstrokes across all switches in the batch, the Lucifer HE switches are well lubed, smooth, and in such a way that the factory lube is barely noticeable. The only real downside to these switches are their slightly inconsistent firm, flat, and plasticky housing collisions which become thinner and sharper feeling at higher actuation speeds.

#### Wobble

More present in the N/S direction than the E/W direction, the Geon Lucifer HE switches have a bit more stem wobble than other Grain Gold made HE switches though it is still about on par with all switches I've encountered to date. This isn't likely to bother too many users.

#### Sound

The Geon Lucifer HE linears are medium loud in volume with a sound profile largely driven by their pointed, flat, medium pitched bottom outs. The topping outs of these switches are a bit higher pitched and thinner than the bottom outs, however this gap narrows a bit with faster or more aggressive typing as the bottom outs tend to pitch upwards and become sharper in tone. There isn't much sound from scratch present in any one, singular switch on average, though a few switches in my batch had subtle shuffling scratch tones towards their bottom outs.

#### Context

Priced at \$0.28 per switch from Korea's largest keyboard brand today in Geonworks, these have all the ability to make a splash and help continue to push HE switches to mainstream in the community, except for the fact that they directly compete with other HE switches from Geon...

#### Other

Alongside the Raw HE and Raptor Extreme HE switches, nobody is doing more to push HE switches mainstream than Geon – both through boards and switches like these very ones.
