Notes

Push Feel

In spite of the fact that the Cedar switches are from Gateron's budget-focused sub brand in Everfree, they clearly are strongly built, smooth linear switches that were made with Gateron's high quality manufacturing. These switches are consistently smooth with a medium-heavy factory lubing and a pair of balanced, flat and snappy housing collisions that make for an overall feeling that is much more premium than what their price point belays.

Wobble

The Everfree Cedar switches have very little N/S and E/W direction stem wobble on average, with only some minor inconsistency on this metric between switches from any given batch. It's almost certain that this will not be a problem for most users.

Sound

Honestly, the sound is by far one of the most impressive aspects of the Everfree Cedars as they sound just as solid, coherent, and well balanced as their push feeling notes above describe. While there is some variation in the housing collisions of these switches in the form of speed-based volume changes and some sticky tones, they're not drastic enough to seriously ruin the overall sound profile of these switches.

Context

Truly a budget switch unlike most others, the Everfree Cedars have a wide community adoption and market availability at a price point of \$0.30-0.40 per switch that is unheard of for switches of Gateron's quality. These really are comparable, if not better, than the vast majority of linear switches that could be purchased in this price range and you should seriously be considering these if budget it high up on your list of concerns.

Other

The sticking power of the Everfree line of switches and their accessibility as a sub-brand is absolutely unparalleled from a manufacturer like Gateron and they should be applauded for it.
