

Kailh Pro Light Green (Plate Mount)

Last Update: 01/16/2022 (V2)

Kailh Pro Light Green		
Switch Type: Clicky		Kailh
22	/35	Push Feel
14	/25	Wobble
4	/10	Sound
12	/20	Context
6	/10	Other
58	/100	Total

Notes

Push Feel

Click jacket style clicky switches have almost always been notoriously poor performing with respect to push feel, and with regards to that these switches are surprisingly marginally better than most. With the same short, sharp, and flat feeling clicky bump, the solid bottoming out feeling does help distract with the problematically thin, plasticky feeling topping out of the Pro line of switches from Kailh.

Wobble

The Pro Light Greens have a noticeable amount of stem wobble in both N/S and E/W directions that may be problematic depending on the users' tolerance to step wobble. Top housing wobble, on the other hand, may as well not even dream of existing due to the clamshell style used by Kailh in these switches.

Sound

These have a fairly sharp, short, and dulled click sound much like that noted above in the 'Push Feel' section. Marring this, though, is a metallic crunch from either the spring or interaction between the leaf and click jacket making for an altogether unpleasant but not unsurprising sound from a click jacket mechanism switch.

Context

While these do deserve some recognition for their staying power and relative budget-friendly nature like their other Pro siblings, these are definitely much harder to pitch as 'relevant' with Kailh offering similarly available, longer running 'S-Tier' clicky switches in Jades and Navies.

Other

One thing worth noting extra about the longevity, here, is that these are almost certainly the most prevalent clickies with the mechanism short of Cherry MX Blues and should be considered with some extra historical care with this consideration in mind.
