

Bobagum (62g)

Last Update: 01/16/2022 (V2)

Bobagum (62g)		
Type: Silent Linear		Outemu
28	/35	Push Feel
23	/25	Wobble
8	/10	Sound
15	/20	Context
8	/10	Other
82	/100	Total

Notes

Push Feel

These are an excellent silent linear analogue to that of their tactile predecessors in Gazzew's Boba U4 switches. With a bit of a consistently dry feeling due to his preference of lighter factory lube applications, these switches are otherwise spot on for a silent linear switch with a firm, solid pair of housing collisions and no mushiness from the silencing pads on the stems.

Wobble

Coming with a minor, almost certainly unnoticeable amount of stem wobble in the E/W direction and virtually no N/S direction stem wobble, these switches are a home run with respect to stem and top housing wobble and are a great gold star standard of comparison.

Sound

These switches come about as close to possible to nailing the 'silent' part of the silent linear switch at nearly all the points where sound could be made. Throughout the stroke and at both ends of it there is virtually no noise with only an ever so slight, inconsistent spring ping across a batch of switches that is easily fixable with a minor application of aftermarket lube.

Context

Coming as one of the more colorful options that Gazzew has released throughout his storied career, these further up the wow factor in terms of design and are fairly widely available across the world. Decent pricing and large community presence of these switches makes them pretty strongly thought of switches even though they sit in the shadows of the Boba U4 and U4T switches just a little bit.

Other

While progress has slowed a bit with respect to releases from Gazzew since these were released, they bode well for a further improving switch in the future and will likely be a stepping-stone to further incremental but significant changes in future releases from him and Outemu.
