77	/100	Total

Notes

Push Feel

Much like its sibling in Kailh Box Jades, the click bars in Box Navies are crisp, consistent, sharp, and feel exactly the same over prolonged use. As well, they share a bottoming and topping out that doesn't detract from the feel at all. The increased spring weight compared to the Jades, though, helps mitigate the impact of the scratchy pre-click linear region.

Wobble

While the winglatch style connectors remove all top housing wobble, there is a fair amount of E/W stem wobble in this switch with a slightly greater wobble in the N/S direction that may be noticeable with keycaps on depending upon the user.

Sound

Sharp. Pointed. Consistent. And deep. Box Navies are among the loudest yet most solid sounding clicky switches out there and suffer only a little bit from a subtle spring ping if activated close to the ear.

Context

These near gold standard clicky switches have stood the test of time, are incredibly widely available, and super cheap. There is a reason that these switches are considered among the gold standard of clicky switches and will always be a recommendation for beginners.

Other

Much like its sibling in Kailh Box Jades, my only real detriment to this switch (other than the issues listed above) is that the most widely recognized, available, and cheapest version come in Box style, which has historically had the potential to cause issues with keycaps.
