### Notes

#### Push Feel

Despite using the same mid-stem silencing mechanism that has made LICHICX's Lucy switches and all of their flavors of spin-offs since, an overwhelming success in the silent switch realm, these silent linears fall a bit short of those expectations because of really everything else. Inconsistent, seemingly sometimes absent factory lubing makes these switches inconsistently scratchy with a small grain, dragging scratch feeling detracts from otherwise good performance.

#### Wobble

Not only do the LICHICX Yogurt silent linears have an average amount of stem wobble for a LICHICX-made switch, but they also have an average amount for a modern, MX-style switch. Noticeable but not likely problematic amounts of equal magnitude N/S and E/W direction stem wobbles are present in these switches.

#### Sound

For being silent linear switches, the LICHICX Yogurt switches do quite well at dampening out sound. The mid-stem silencing mechanism employed here makes both the topping and bottoming out hardly noticeable at all, with the only real sound to be heard in these switches related to that of the aforementioned scratch that was pointed out in the push feeling notes above.

#### Context

Priced at \$0.50 per switch and not particularly all that well marketed despite them being a branded collaboration with 'Xllab', these are okay silent linear switches from LICHICX that will ultimately be forgotten by the community at large in favor of more stunning, big name releases.

#### Other

While it is nice to see that LICHICX has fully leaned into their unique silencing mechanism, recent rumors about their closing of shop makes me wonder if these are among the last grasps at capitalizing on technology that should have led to an explosion of LICHICX's popularity...
