

OArmy Green

Last Update: 10/09/2022

OArmy Green		
Switch Type: Clicky		Greetech
14	/35	Push Feel
12	/25	Wobble
3	/10	Sound
7	/20	Context
2	/10	Other
38	/100	Total

Notes

Push Feel

The Greetech-made OArmy Greens are practically a case study in just how bad the click jacket mechanism can be implemented. While I thought that Razer switches were already pretty bad with respect to this metric, the fact that the OArmy Greens have distinctly different feeling mechanism *depending on where you press the stem in* just takes the cake. This isn't even mentioning the scratch and the inconsistent, awful feeling housing collisions either.

Wobble

Whereas there is a decent amount of N/S and E/W stem wobble that isn't entirely out of the realm of expectation for off-brand Greetech switches, the sheer amount of E/W top housing wobble is incredible. It's almost to the point where I'm not certain most aftermarket films could improve upon this.

Sound

Much like with the 'Push Feel' notes above, the OArmy Greens sound just god awful with respect to their click jacket mechanism. Like putting plastic in a blender with some metal bits for ping to accompany it, the only remotely saving "grace" these switches provide is that there isn't an overwhelming amount of scratch sound on top of this as well.

Context

Exclusively placed within arguably one of the ugliest prebuilt keyboards ever in the Azio Armato CEs, the fact that these switches were only used in some of these boards as a replacement for original Kailh Blues should speak volumes about their quality. I mean this may as well be the switch equivalent of loading up Rice Krispie treats with wood shavings. At least it certainly helped keep the cost of the board lower in the end, I guess.

Other

In lieu of knowing that the maker of this switch is Greetech, who have been notorious for making bad switches as is, the fact that these are *still* shockingly bad is a testament in itself.
