Notes

Push Feel

The downstroke and upstroke of the Sakura Pink V2s are incredibly smooth and consistent at all speeds of activation. The biggest detractor from the feel is that the light, 45g spring produces a very hollow, and thin feeling bottoming out and topping out feel.

Wobble

While the top housing tolerances are spot on in preventing housing wobble in these switches, the stem suffers quite a fair bit in both N/S and E/W directions with wobble – which is likely only further aggravated by the lighter spring weight.

Sound

The sound of the bottoming out and topping out portions accurately follow the push feel notes with a harshly thin and hollow sound. As well, at higher rates of activation a slight ping in the spring does become noticeable towards the topping out section.

Context

Everglide V2s stand as an excellent addition to the Everglide line, and continue a general presence of quality linear switches. That being said, these aren't nearly as accessible nor recognized in the community at large due to their limited presence to only Aliexpress/Taobao.

Other

While I am not personally a fan of lighter linear switches, I think that this switch is a decently viable option stock if you don't mind a bit of wobble. However, the frankenswitch-ability of the housings is what gives me the most attention with the Sakura Pink V2s.
