

Lumia Matcha (62g)

Last Update: 03/20/2022

Lumia Matcha (62g)		
Switch Type: Linear		Unknown
26	/35	Push Feel
17	/25	Wobble
7	/10	Sound
11	/20	Context
7	/10	Other
68	/100	Total

Notes

Push Feel

While some marketing material suggests that these switches may be hand lubed whereas others claim it was done by the factory, there's no question that these switches definitely are *lubed*.

Feeling closer to an overapplication of lube by hand than a more subtle approach, these linears are incredibly smooth but quite 'slow' and dampened as a result.

Wobble

There is a slightly noticeable, potentially problematic amount of stem wobble in the N/S direction of these switches with only perhaps a minor, significantly lesser amount in the E/W direction. Additional concerns are raised here as some portions of the batch have ever so slight N/S direction budges in the stem wobble.

Sound

Even though these Lumia Matchas certainly feel overlubed, to a degree the sound dampening this provides is extremely enticing and makes these switches feel more like silent linears than some silent linears out there. While the housing collision sounds aren't quite as balanced, the topping out is at least solid and firm sounding, albeit higher pitched than that of the bottoming out.

Context

Lumia has been and always will be a certainly mysterious company with respect to their switch releases and/or origins. While they do carry slightly more attention and attraction than other minor eastern brands, their switches, and by extension the Lumia Matchas, are slightly overpriced and under-available relative to what the company *could* do.

Other

One thing that makes Lumia as interesting of a brand as they are to me is that they are simply willing to go crazy with stem lubrication concepts. Whether or not these are lubed by hand, these are lubed truly unlike many if any other linear switches out there...
