Notes

Push Feel

These long-poled, JWK made linear switches are completely on par with the community-driven expectations of the company this far into their manufacturing history. While overall smooth with a slight bit of constant, small grain scratch to them, these switches have a surprisingly well balanced but overall thin feeling set of housing collisions due to the extended stem pole at bottoming out and polycarbonate top housing at topping out.

Wobble

Again, these switches don't really step all that far outside of the realm of expectations of Durock/JWK made switches though they definitely are not the absolute best the factory has ever produced. Even without top housing wobble, the stems in these switches have a noticeable amount of stem wobble in both directions and especially in the N/S direction.

Sound

Unlike the push feeling of these switches, the sound of these switches completely avoids the scratch while doubling down on the housing features. While the bottoming out is decently mid-pitched and only a tiny bit plasticky, the topping out is very much prone to sounding very high pitched, sharp, and plasticky at any typing speeds beyond a casual monkeytype warmup.

Context

Marketing and availability aside, these switches ultimately just continue a line of Durock/JWK releases which are good in stock form but definitely not perfect. Considering though that these are a company specific, stock-held switch readily available to beginners and at a decent price though, it's nice to know a wide array of Durock/JWK price and quality points continue to remain available in the west.

Other

The packaging of these switches, in and of itself, deserves a notice here as one of more unique, creative, and interesting bag designs that I've seen in switches to date.
