Attack Shark Blue Jelly

Switch Type: Tactile		Unknown
24	/35	Push Feel
16	/25	Wobble
4	/10	Sound
11	/20	Context
5	/10	Other
60	/100	Total

Notes

Push Feel

The Attack Shark Blues are Attack Shark's flagship tactile switch featuring a slightly snappy, medium-strong tactile bump that sits just below a slight linear pretravel and right above a fairly sharp, pointy bottom out above 4.00 mm. In addition to the bottoming out feeling of these switches being rather inconsistent from stroke to stroke, there's also a large amount of large grain, sandpapery scratch that is rampant through all parts of the stroke of this switch.

Wobble

These Blue Jelly switches have a noticeable amount of equal magnitude N/S and E/W direction stem wobble. While not likely to bother most users, people who are somewhat particular about stem wobble may take issue with these here.

Sound

The main driver of the sound profile of the Attack Shark Blue Jelly switches is that of the sharp, almost clicky-like bottoming out that is high in pitch and wildly changing depending on typing speed and from switch to switch. While some people do prefer their switches to sound this aggressive at the end of a stroke, it's this inconsistency mixed with the scratching tones throughout the stroke above it that really detract from these sounding all that good.

Context

While Attack Shark does seem to be supporting these switches as aftermarket options outside of their prebuilt keyboard lineup, and at a beginner-friendly price of around \$0.30 per switch, these have quite a bit of flaws at their price point. This, as well as the general lack of community interest in the Attack Shark brand could easily lead to these no longer being available to the community in weeks or months, with no telling of their support for these switches.

Other

It is somewhat refreshing to see even unserious brands like 'Attack Shark' dedicate themselves to supporting their own in house, flagship switches, but these need some serious work...
