Notes

Push Feel

Much like their group-buy, tactile counterpart in Cranes, these switches really suffer from a harshly thin topping out feeling that hurts the push feel of these. Unlike the Cranes, though, there is a significantly more prevalent and/or more noticeable scratch that is fairly uncharacteristic of JWK as a whole.

Wobble

While there is typical JWK stem wobble on one hand, with low and likely unnoticeable N/S and E/W stem wobble, there is atypical top housing wobble in the other hand, which will likely require the use of films in order to be used well.

Sound

High-pitched, sharp topping out noise. Audible sound from scratch towards the bottom end of the stroke. Occasional spring ping at high activation speeds. Just add some eye of newt and toad's fingers for a recipe for disaster.

Context

While I'm normally quite happy to try another JWK linear switch, these appear to have been a gimmick run alongside Cranes to try and exploit the 'extra-long' spring attempt in two switch types rather than one. JWK, don't let your attempts to improve your tactiles ruin the good thing you have going with linears.

Other

Aside the slight similarity in stem color, the fact that these are even remotely associated with Gateron Giants, and JWK All-Clear Giants by name is quite frustrating and dishonest, as these do not live up to either of their predecessors on many, if not all fronts.
