14	/25	Wobble
6	/10	Sound
12	/20	Context
5	/10	Other
63	/100	Total

Notes

Push Feel

For being a fairly common weighting at 62g, these linear switches from a fairly new maker in KTT are a great introduction. While the topping out feeling is a bit plasticky, these are mostly smooth with a tiny bit of scratch, and a fairly firm bottoming out feeling to make for a great 'average' linear switch.

Wobble

While the winglatch design of these KTT switches completely eliminates top housing wobble, the score for these is dinged a bit by the stem wobble. With likely unnoticeable stem wobble in the N/S direction, there is a potentially noticeable to noticeable E/W direction stem wobble.

Sound

Much like with the push feel section, these sound surprisingly good for a fairly new switch house. The only real drawbacks are a slightly audible scratch sound to match the push feel scratch as well as a potentially audible spring ping at high activation speeds.

Context

Even though this is a fairly conservative choice in terms of design, weighting, and colorway from a new manufacturer, these show a solid design capability and win a ton of brownie points for simply how cheap and available these are in bulk quantities from China.

Other

Again, while not the first switch property from KTT, these are among the first lot of stuff that they have produced and are already competitive at a price per quality level. I'd be very curious to see how they improve and move forward in their coming designs.
