Notes

Push Feel

Aside the ever so slight scratch that is noticeable in the stroke of these switches, I am quite impressed at how dense these things feel. The bottoming out and topping out of these are incredibly solid, forceful, and have very little 'mushy' quality to them that silent switches are often associated with.

Wobble

Hell, in much the same fashion as push feel, I was incredibly impressed by the wobble in these switches. While the 67g force may have helped reduce it a bit, there is only potentially noticeable stem wobble in the N/S direction and no top housing wobble at all.

Sound

At arms-length, in hand these switches are near virtually silent, with the only noticeable noise up close coming from scratch and an ever so slight spring ping. When testing in a metal case, though, these sounds do occasionally become noticeable at higher typing speeds.

Context

While Zambumon is an expert in marketing great keycap sets, these switches flew fairly under the radar as a limited run groupbuy back when Durock/JWK first introduced silent linears onto the market. Had it been for just a little bit better marketing, these easily could have been contenders for the community's newest favorite silent linear.

Other

The construction of these switches blew me away and the bright yellow top housings pop significantly more in person than in the renders, making these quite a sleeper option for silent linear fans or franenswitchers.
