3	/10	Sound
12	/20	Context
5	/10	Other
65	/100	Total

Notes

Push Feel

Overall, the smoothness of these switches honestly feels just a tad lesser than their original, V1 counterparts, but are still in that 'JWK' level of smoothness of switches. Aside this ever so slightly lesser-smooth feeling, the updated versions now carry some form of inconsistent metallic ping induced by the spring to the topping out as well

Wobble

Moving fully to the new 'V1.5' molds used by Lavender switches, these have a likely noticeable amount of N/S and E/W stem wobble with absolutely no top housing wobble.

Sound

While these switches, overall, sound marginally deeper, they still suffer from the same high pitched, thin, and plasticky style topping out of polycarbonate top housings. As well, the added metallic spring ping also produces a noise that is noticeable at topping out.

Context

Coming to the market as a 'new' and 'updated' version of the Original Aspiration switches, which had a fair amount of issues on their own, it is nice to know that Wuque is interested in slowly improving their switches and making them better for the general audience. However, for the price and only minor shifting of the problems around for these switches, the improvements are not nearly as palpable as desired.

Other

While I genuinely wanted these switches to be better, and for the molds' sake they have technically improved, these switches only take a bigger step back in terms of their original issues in terms of sound.
