

KK Lightwave

Last Update: 09/18/2020

KK Lightwave		
22	/35	Push Feel
11	/25	Wobble
5	/10	Sound
7	/20	Context
5	/10	Other
50	/100	Total

Notes

Push Feel

While there is a relatively consistent stroke feel for this long-springed linear switch, there is a fairly nasty amount of scratch as well as a completely unnoticeable bottoming out that makes the switch's only real feeling (other than scratch) is an abrupt, plasticky topping out.

Wobble

Strangely enough, the KK Lightwave has almost 'reversed' wobble issues as compared to other switches, featuring a likely noticeable amount of N/S direction stem wobble and a certainly noticeable with keycaps on E/W wobble. There is not any top housing wobble.

Sound

Much like the push feel of these switches, the only real noises present are a scratching sound which is overpowered by the sharp, plasticky topping out noise that starts to sound a bit like a pen clicking after being done enough times.

Context

Coming out of absolutely nowhere from Velocifire, of all places, the renders did not match the product which, itself, is completely incorrectly marketed. Overall, these very much come across in the current market as a "why were these attempted?"

Other

While this score is mostly impacted by my above stated feelings about context, as well as this being one of the worse switches to come from Tecsee (where we believe these are from), there is some redeeming gimmick in the long spring of these switches. Even though they aren't amazing, the usability definitely opens the door for the future exploration of extra-long springs in other brands.
