Notes

Push Feel

Aimed at being a tactile somewhere in between “Holy Pandas” and BSUN Hutt switches, the BSUN Strawberry Cheesecakes are very clearly medium-heavy tactile switches with a punchy bump that hits very close to the top of the downstroke with basically no pretravel. Lubed only on the slider rails, the switches have a bit of a leathery tactile bump feeling, though this is much less noticeable followed up by the firm, pointed bottom out onto their stem pole. It should be noted that this bottoming out feeling is not the most consistent, however.

Wobble

There is a slightly worse than average, equal magnitude N/S and E/W direction stem wobble in the Strawberry Cheesecakes which likely won’t bother most users but could bother those using taller keycaps or more picky about their switch stem wobble.

Sound

Much like my experiences with most other Holy Panda-inspired tactiles before this one, while they sound just okay on the whole, there’s a lot of small points that take away from a larger, more cohesive overall sound profile. Things such as an inconsistent sounding bottom out, the leathery and only sometimes snappy sounding tactile bumps, and a general ‘stickiness’ to the tone at bottom out take away from an otherwise medium-loud, snappy tactile vibe.

Context

In spite of these switches seemingly not having had a lot of community hype surrounding them, these are available at nearly a dozen vendors all around the globe and at a decent stocked price of around \$0.50 per switch. Clearly their designers at ‘Toro’ cared to make sure they got around.

Other

While it is nice to see homages to classic switches, making a Holy Panda like switch with just a ‘POK’ housing and an ‘LY’ stem (whatever those are) doesn’t actually make the switches distinctive enough to warrant nearly as much attention from the community as Toro desired.
