

## Everglide Jade Green V2

Last Update: 08/27/2020

Everglide Jade Green V2		
15	/35	Push Feel
12	/25	Wobble
6	/10	Sound
10	/20	Context
4	/10	Other
47	/100	<b>Total</b>

### Notes

#### Push Feel

Originally, this switch was posted as a 'linear' score purely due to how small and noticeable the tactile bump is without being told. Aside the obvious failure at being a tactile switch, the stroke is otherwise fairly smooth for the Everglide line, with some drawbacks in the hollow and thin bottoming and topping out feelings.

#### Wobble

Aside the strong points for switch top housing tolerances, which have absolutely no give, the biggest detractors from this score are the N/S and E/W wobble on the stem, which likely would be noticeable with any cap height on. The E/W wobble, though, is ever so slightly lesser than in the N/S direction.

#### Sound

Even with no sound based issues from scratch, these switches suffer from a still hollow, yet slightly deep bottoming out sound as well as a hollow and plasticky finish in the upstroke.

#### Context

Everglide V2s, as a group, stand as an excellent addition to the Everglide line, and especially so within the linear category. That being said, these aren't linear switches – supposedly – and thus fail at their primary aim, making them a blemish on an otherwise decent lineup.

#### Other

Even for being lighter in weight than most traditional linear spring weightings at 58g in bottom out force, these stand out as one of the better lighter weight "linear" options for beginners, aside the accessibility issues.
