

## XCJZ Green Tea

Last Update: 05/25/2025

XCJZ Green Tea		
Switch Type: Tactile		LICHICX
26	/35	Push Feel
19	/25	Wobble
4	/10	Sound
10	/20	Context
6	/10	Other
65	/100	<b>Total</b>

### Notes

#### Push Feel

The LICHICX-made Green Tea switches are surprisingly *not* silent tactiles and are instead normal tactiles that pack a lightly forceful, mid-stroke tactile bump that is short, quick, and reminiscent of classic low tactility switches like Cherry MX Browns. On either side of the bump, though, there are some pretty harshly pointed, somewhat sharp housing collisions that are especially noticeable at any sort of elevated typing speeds alongside that of small grain scratch as well.

#### Wobble

The XCJZ Green Tea switches are a touch less wobbly than the average switch but still pack an equal magnitude, slightly noticeable amount of N/S and E/W direction stem wobble.

#### Sound

Despite their small, low strength tactility, these Green Tea switches have a sound profile that would definitely go punch for punch with any medium to medium high strength tactile switch. Not only are these snappy and somewhat leathery sounding through their tactile bump, but they also have housing collisions that are pointed, somewhat sharp, and incredibly adjustable based on typing speed. Toss in some scratch that is worse on the ears than it is on the fingers and these come out surprisingly more variable from switch to switch than you'd imagine.

#### Context

LICHICX was far and away renowned for its silent switches and these may be the single best example as to why. Despite having an excellent designer in tow in XCJZ, these Green Tea tactiles struggle greatly at their price point of \$0.60 per switch and for what LICHICX is more than capable of manufacturing with their other switches.

#### Other

With LICHICX no longer producing switches of their own, these deserve some historical recognition for their uniqueness (and kind of not greatness) in an otherwise stellar catalogue.
