

Zeal Clickiez 75g. (Linear)

Last Update: 07/10/2022

Zeal Clickiez 75g		
Switch Type: Linear		Gateron
27	/35	Push Feel
18	/25	Wobble
5	/10	Sound
13	/20	Context
5	/10	Other
68	/100	Total

Notes

Push Feel

The Linear mode of the Clickiez switches is at best an average performing linear by the standards of comparison to what is currently on the market. While they are smooth as a function of design, there is a slight amount of small grain scratch that is consistent both across the batch and throughout the stroke of the switches. The biggest push feel related issue of these switches is the exact same as that of other Zeal switches – a poor combination of housing materials which leads to a thin and sharp topping out experience.

Wobble

While better than most switches with respect to consistency across the batch, there is still a barely noticeable amount of stem wobble in the N/S and E/W direction that may be problematic for users who are particularly sensitive to wobble or in builds which accentuate it.

Sound

Much like the 'Push Feel' notes above, the Linear mode of the Clickiez switches suffers from being painfully average at best. While there is much less noise from scratch than there is by push feel, the housing choices yet again make for a hard to enjoy linear compared to others out there on the market currently.

Context

The Linear mode of the Clickiez switches is far and away the proof that the 3-in-1 gimmick came at the detriment of the Clicky and Tactile modes. The linears that are produced as a result of removing the click leaf here are average at best and extremely underperforming for the price that they command at \$1.50 per switch. At the time in which this is published, many people would even pay that much for a highly modified, 'perfect' linear switch.

Other

While I still do appreciate the mechanism and historical importance of these switches more than most, if you're buying Clickiez to use them as linears then you've missed the point of them.
