

Gateron Magnetic Jade Delta Dark

Last Update: 02/01/2026

Gateron Magnetic Jade Delta Dark		
Switch Type: Linear		Gateron
30	/35	Push Feel
19	/25	Wobble
8	/10	Sound
8	/20	Context
5	/10	Other
70	/100	Total

Notes

Push Feel

While the Gateron Magnetic Jade Delta Dark switches boast the same large, forceful bottom out as most other Gateron HE switches, they carry a bit of snappy depth to them that is well accented by the modified POM housing topping outs that leaves these a bit more multi-dimensional than not. With solid factory lubing and not much movement in feeling (or really sound) across various typing speeds, the only thing really holding back the push feeling of these switches is some subtle switch to switch inconsistencies.

Wobble

With slightly more stem wobble in the E/W direction than the N/S one, these switches have a small but still noticeable amount of conventional wobble despite their unique stem shape.

Sound

Despite being fairly loud linear switches, the Jade Delta Dark switches have a more sonorous and wide sounding bottom out that comes across way more complex than most other switches with large areas of contact between stem and bottom housing. With a topping out that is all these things but a little bit less, they have a great overall tone just slightly unbalanced and inconsistent across the batch that I received.

Context

With the Gateron Magnetic Jade Delta Dark switches boasting a *steep* price tag of \$1.40 per switch, as well as numerous new molds, you'd think they would be marketed more or more widely available. And yet, these just don't seem to reach as far as previous Gateron HE offerings or have nearly as much community excitement about them even in spite of their new stems.

Other

While the Jade Delta Dark switches are genuinely striking with their triangular stems and textured top housing designs, the lengths to which Gateron went to do such ultimately end at the aesthetics and provide no real, expected performance differences over their other switches.
