

TTC Brother V2

Last Update: 08/02/2026

TTC Brother V2		
Switch Type: Clicky		TTC
30	/35	Push Feel
17	/25	Wobble
7	/10	Sound
12	/20	Context
5	/10	Other
71	/100	Total

Notes

Push Feel

Outfitted with an early to mid-stroke dainty, yet still forceful click bar, the TTC Brother V2 switches have all of the instantaneously sharp and snappy feeling that would be expected of such a clicky mechanism thought without as much of the harsh forcefulness required in similar switches. Additionally, the switches are precisely lubed from the factory and designed in such way as to maximize emphasis on the click bar and no other portion of their push feeling.

Wobble

There is a reasonably average amount of N/S and E/W direction stem wobble to the TTC Brother V2 switches that is not likely to bother most users except those particularly picky about such a metric.

Sound

The sound profile of the TTC Brother V2 switches is one that has all of the hallmarks of a click bar clicky switch – a loud, sharp, singular explosion of sound on downstroke with a slightly subdued though just as noticeable sound on return and not much else to them. Unlike more well known switches with this mechanism, though, the Brother V2s are not nearly as aggressive and are a bit softer, quieter, and also prone to batch wide variation with some switches having more bass notes and a more rounded sound than the shining examples of any batch.

Context

Priced well for their performance between \$0.40-0.50 depending on their source and generally widely available, these have all the accessibility that they could want for though without a lot of community awareness or (at the moment) appreciation for the mechanism. There's really no telling how long these switches will continue to be made by TTC for despite being fairly new.

Other

While I doubt these will be overly historically relevant in due time, at the moment the presence of these click bar clickies in 2026 is a sight for sore eyes and a great niche offering by TTC.
