72	/100	Total

Notes

Push Feel

The Akko Flash Magnetic switches were one of first two Hall Effect style switches offered by Akko starting in late 2025, and while they are solid feeling for a debut HE linear, they aren't without flaws. The switches on the whole are smooth and have factory lubrication, though suffer from a slightly shuffling scratch sound present throughout all switches and all of their strokes. As for the housing collisions, while they are firm and a bit more solid feeling than some other switches, they too have an inconsistent shuffling/popping feeling likely due to factory lube.

Wobble

Without a lot of stem wobble in the E/W direction, the majority of the Flash's wobble is in the N/S direction where there is also the tiniest bit of housing give in this direction as well. It's not enough to warrant filming of the flashes, but it definitely is noticeable in hand.

Sound

On the whole the Akko Flash Magnetics are quiet, more bass centered HE linears without aggressive stem pole bottom outs or weirdly plasticky material. That being said, though, the noted shuffling sounds as well as inconsistent popping sounds at both bottom out and top out are especially noticeable not just the sound profile of these switches, but especially so at faster typing speeds and/or more aggressive typing.

Context

You really *can't* argue with Akko's ability to make a switch that is cheap (~\$0.31 per switch here), widely available, and stocked for a long time. These are still more than accessible headed towards a year after their arrival, though they definitely are among the lesser of Akko's options now as they have released the AstroAim to surpass these and their sibling Astrolink HEs.

Other

These very much are/were a 'time and place' switch where they were good for what they were, when they were, but just ultimately will not hold up to Akko's continual progress over time.
