Notes

Push Feel

The BSUN Mozzarella switches are billed as out of the gate, mid- to light force tactile switches that are noticeable under finger though soft enough as to not induce fatigue through long periods of typing. While it is true that the cushioned, rolling tactile bump and factory smoothness make for a stroke that feels fairly effortless and amenable to long term use, the slightly pointed, snappy bottom out feeling at the end of a stunted 3.3 mm stroke says otherwise. Pair this up with some switch by switch inconsistency with respect to this bottom out, which is more prevalent in feeling than the tactile bump, and these aren't quite as kind as you'd suspect.

Wobble

Coming with an average amount of equal magnitude N/S and E/W direction stem wobble, it is not likely that this will bother most users unless they are picky about such a metric.

Sound

The inconsistency in bottom out harshness as noted above is only more so evident here in the sound of the Mozzarellas, with them having a good number of switches which are louder, a bit higher pitched, and more noticeable at bottom out than others – something exacerbated by different typing speeds. Besides this, though, the switches don't sound that bad and their tactile bump as a soft, medium-pitched tone that blends into the background of the bottom outs.

Context

Priced at \$0.40 per switch from a steadily growing again BSUN, these switches are decent performing for their price point but hardly offer much in the way of novelty in design or execution. I'm certain this won't be the last POK over POM tactile with LY stem from BSUN we'll see this year, or next year, or even the one after that...

Other

While the aesthetics appear somewhat basic here, the continuation of cheese themes here by the designers of the HMX Cheese switches is making for a fun developmental saga to watch unfold.
