

HMX Yogurt S (37g)

Last Update: 06/28/2026

HMX Yogurt S (37g)		
Switch Type: Linear		HMX
28	/35	Push Feel
21	/25	Wobble
5	/10	Sound
12	/20	Context
6	/10	Other
72	/100	Total

Notes

Push Feel

Boasting a new bottom housing formulation from HMX – P7, or nylon with 50% fiberglass inclusion – the Yogurt S switches were designed by XLLAB to be everything the Yogurt V1 and V2 switches were, though with an emphasis on a sharp, crisp bottom out. And while these switches are consistently well lubed from the factory and smooth throughout their strokes, they feel a bit muddled at this bottom out. Yes, the center pole of the stems is the clear collision point for these switches at bottom out, but they feel softer, less forceful, and in turn less noticeable than one would expect. I see no differentiation here versus other bottom housing materials.

Wobble

While there is a noticeable amount of N/S direction stem wobble, the Yogurt S switches have no E/W direction stem wobble to them whatsoever – a bit of a surprisingly strange combination.

Sound

Echoing the point about a lack of focus from the push feeling notes above, these switches were clearly marketed as and designed around the sound and feeling of the P7 material bottom outs and we just don't get that well here. Instead of extending the stem by another fraction of a millimeter to really drive home that collision, we're left with a barely pointed, sometimes soft bottom out that modulates quite a bit in its sharper, higher pitched tones across typing speeds.

Context

While these are priced well from HMX at \$0.35 per switch, and backed by a continually producing designer in XLLAB, it does feel as if they are just iterating through designs with public funds via HMX. There's no telling if the Yogurt S switches will be the final incarnations in the Yogurt line up or if they'll be surpassed in another month with yet another tweak.

Other

Much like in other switches I've done scoring for from XLLAB, I absolutely applaud the continued pushing of material types and functionalities, even if they don't perform the best.
