

## Wingtree Camellia (52g)

Last Update: 04/26/2026

### Wingtree Camellia (52g)

| Switch Type: Linear |      | Wingtree     |
|---------------------|------|--------------|
| 28                  | /35  | Push Feel    |
| 18                  | /25  | Wobble       |
| 6                   | /10  | Sound        |
| 12                  | /20  | Context      |
| 4                   | /10  | Other        |
| 68                  | /100 | <b>Total</b> |

### Notes

#### Push Feel

Designed with new molds to mimic the Wingtree Yuying Blacks' sound, the push feeling of the Camellias was clearly the secondary concern for these switches. While factory lubed, these switches possess a fine grain, leathery scratch to them that waxes and wanes across the batch that I received. As well, this inconsistent factory lubing does cause some switches to have slightly more deadened bottom outs than others, though on the whole they are fairly deep and firm feeling, without much of a bite to them.

#### Wobble

With an equal magnitude N/S and E/W stem wobble, the Camellias have more wobble than I've seen in any Wingtree-made switches to date, something which is a bit surprising given that they were purportedly made using new molds.

#### Sound

While the Wingtree Camellias were designed to sound "cleaner and more concentrated" at bottom out, I'm a bit dubious as to their success of such. Compared to other linears the Camellias are deeper, less pointed, and with a very soft, somewhat snappy sounding bottom out that leans more towards a "full nylon bottom out" than a "long stem pole" one. It's certainly not bad by any stretch, and the scratch that was noted above in the push feeling notes isn't as prevalent here, though it does just miss the mark a bit.

#### Context

Priced around \$0.35 per switch, the Camellias have quite a range of variants and are able to be purchased widely, though for what length in time is unknown. Wingtree has yet to really establish a consistent pace of releases – and much less so with their collaborative releases.

#### Other

Wingtree definitely is deserving of credit in these for their development of new, different molds, though they are clearly off the mark with what they were trying to accomplish in these switches.
