5	/10	Other
76	/100	Total

Notes

Push Feel

Specifically designed to be a short-throw linear, the Wingtree Corals feature a short actuation point around 1.4 mm in depth and a 3.4 mm bottom out point – a feature which is incredibly apparent by their pointed, firm, and somewhat tacky bottom out onto their fiberglass reinforced nylon housings. The Corals are generally smooth with a thin layer of well applied factory lubrication but struggle with some switch by switch inconsistency in this much like they do at the point of bottom out.

Wobble

Ever so slightly greater in the N/S direction than the E/W one, the Wingtree Coral switches are a fair bit better than the average keyboard switch on this metric though still have some room for improvement.

Sound

While quite a few other recent linears have combined together long, UPE-material stems with fiberglass reinforced nylon bottom housings at the end of the strokes, these are among the ones which have done it the most directly. Even being free of errant sounds like ping or sharpness, the bottom outs of the Corals are a bit one dimensional sounding, with a medium volumed, medium pitched flat sound at bottom out. Topping outs, as a result of their polycarbonate constructions are significantly softer and less noticeable as a result of such.

Context

Priced around \$0.35 per switch, these have a great spread of availability and solid performance for their price. However, these are tied into the BSUN Identity Crisis as part of Ruben through Wingtree. Their long term availability is all but questionable based on this note.

Other

While Wingtree does earn credit for creating such a tight, compacted switch without a lot of the sharp edges that those normally come with, the overall design is a bit 'plain' by all standards.
