24	/25	Wobble
5	/10	Sound
13	/20	Context
5	/10	Other
75	/100	**Total**

Notes

Push Feel

The HMX Reze are medium strength tactiles with a bump that punches right out of the gate with a muted snappiness and falls just as quickly to a firm, though not muted nor squishy bottom out. A strong amount of factory lubing gives these switches a smoothness and insularity that both aids the bump and bottom out in feeling tight, cohesive, and solid, though also gives them some slight variability across the batch that I received. Overall, despite the bottom out weight of these switches ~55 gf, they have an overall feeling of a much heavier, more substantial switch.

Wobble

Present ever so slightly more in the N/S direction than the E/W direction, the HMX Reze have very little stem wobble to the point that you'd be hard pressed to find a user that would have an issue with this metric in these switches. This is also quite consistent from switch to switch.

Sound

On average, the Reze tactiles have a quite intriguing depth both through their tactile bump and bottom out that come across a bass-focused, deep snapping sound that is completely cut off at the sharp ends in an almost deadened like fashion. While there is some variability to this with subtle layers of leaf ping or sharper tones at bottom out poking through in a good few switches, it generally is pleasant. In addition to this, there are also some switches that have slightly scratchier sounding strokes than others.

Context

Priced around ~$0.40-0.45 per switch depending on their source, these switches are pretty strong performers at their price point though begging to be forgotten amidst an ever growing list of equally as capable HMX offerings – even with their 'unique' combination of materials.

Other

While it is always nice to have strongly performing tactiles at low price points for newer individuals, these just feel a bit uninspired in their execution and without as many selling points.
