Notes

Push Feel

With an incredibly small, centered in stroke light tactile bump and a very specific amount of factory lubing that still leaves the switches with a sandy, scratchy feeling stroke, the Matcha Cream tactiles aim to invoke refined memories of the classic MX Brown tactiles – and they do so relatively well. While the housing collisions leave a bit to be desired, with the topping outs being a bit thin feeling relative to the inconsistently firmer, more solid bottom out, it's definitely a relatively well done homage that quite a few other manufacturers are aiming to do right now.

Wobble

Equal in magnitude in both N/S and E/W directions, the Wingtree Matcha Cream switches have a tiny amount of stem wobble that is not likely to bother most users except those that are particularly picky about this metric.

Sound

Despite what you may think given the score above, the induced scratchiness in these switches is not really all that apparent tonally at all. (The light tactile bump isn't either, though that is more expected.) Instead, the sound profile of these switches is largely driven by their blended nylon housing collisions which are strangely asymmetrical and prone to drifting across typing speeds, with the bottom outs deeper and more firm than the thinner, shaper sounding topping outs.

Context

Priced at $0.35 per switch and with a small, but not unnoticeable amount of community attention, these switches are strong offerings by Wingtree to fill a specific niche, though to what end? It is not likely that these will be around super long as Wingtree continues to improve.

Other

2026 has shown an increase in manufacturers attempting to create intentionally scratchy (or "sandy") feeling switches in an attempt to invoke the old school aesthetic of classic Cherry switches which is both admirable and done very well here relative to a few others I've tried.
