Cherry MX Lumina Brown

Switch Type: Tactile		Cherry
25	/35	Push Feel
15	/25	Wobble
3	/10	Sound
8	/20	Context
4	/10	Other
55	/100	Total

Notes

Push Feel

In spite of carrying an identical mid-stroke, soft tactile bump like all other prior Cherry MX Brown variants, the MX Lumina Browns completely miss clearing the low bar for the archetype. Made with ostensibly thinner, cheaper materials than Cherry's iconic nylon, these switches have topping and bottom outs that are thin, cheap, and plasticky feeling when consistent, and rarely consistent at that. These feel more like a cheap OEM-style Brown redo from an unknown manufacturer than the next step in Cherry's iconic line of tactiles.

Wobble

There is a rather substantial amount of stem wobble in both N/S and E/W directions that allow the stems of these switches to nearly be able to be rotated around in the housings. I have not seen stem wobble as significant as this in many switches in the last handful of years.

Sound

While not super heavy on spring ping or leaf ping, these switches have none of the charm of classic Cherry switches that lead them to putting up with the less savory aspects. These switches are scratchy, have thin, cheap, and plasticky sounding bottom outs, and are incredibly inconsistent in tones with respect to all of these features both cross batch and across typing speeds.

Context

Even when priced at \$0.27 per switch – a number which is basically ultra budget friendly in the switch world – these switches have questionable value. Combine this with the unusual release style by Cherry, lack of documentation or marketing of any form, and concerns about their future in China, there's no telling what will become of these switches months down the road.

Other

If these truly are solely the efforts of Cherry, I can respect the attempts to modernize towards more RGB-friendly audiences, but this is a massive step back in switch performance for them.
