Notes

Push Feel

Capping off a 3.8 mm downstroke with a ~54 gf. bottom out onto LICHICX's iconic mid-stem dampening mechanism, the Wingtree-made Pink Pink switches are a reincarnation of the classic LICHICX silent linear in all of the truest senses. These switches are perfectly smooth and capped on either end by firm yet still dampened housing collisions that don't change whatsoever despite differences in top versus bottom housing material and only the tiniest bit across the full range of different typing speeds.

Wobble

There is a noticeable but not overly problematic amount of equal magnitude N/S and E/W direction stem wobble in the Wingtree Pink Pink switches that isn't likely to bother most users.

Sound

Being a nearly beat for beat recreation of the classic LICHICX switches, the Pink Pink silent linears also have a lack of sound that perfectly matches their predecessors. Save for the tiniest amount of squish that can be heard at bottom out and that is exacerbated with elevated typing speeds, these switches just don't make noise – no ping, no scratch, no squeak, no slam, and nothing you would want to hear in a silent linear switch.

Context

Priced at \$0.40 per switch since their debut in January of 2026, the Wingtree Pink Pink switches are incredibly well priced for their performance and moderately accessible to users in the west, though with a questionable degree of backing from Wingtree. Despite perfectly nailing the classic LICHICX silent linear switch vibe here, they do not seem to have marketed these or pushed for their continuation nearly as much as some of their other more customized offerings.

Other

While these hit their target of being LICHICX-like silent linear recreations, they also are just that. There's still some room for Wingtree/Ruben to add a tiny bit of unique flair to these switches.
