Wingtree Berry Cheesecake (45g)

Last Update: 10/18/2026

Wingtree Berry Cheesecake		
Type: Silent Linear		*Wingtree*
33	/35	Push Feel
17	/25	Wobble
7	/10	Sound
12	/20	Context
4	/10	Other
73	/100	**Total**

Notes

Push Feel

Constructed using LICHICX's old silent linear molds, the Wingtree Berry Cheesecake switches are (yet) another entry by Wingtree into the silent linear space to ensure they make their money's worth of the acquisition. All the expected things are here with a smooth, precisely lubed stroke, a firm, not at all squishy dampened bottom out, and an equally firm topping out to round out the stroke.

Wobble

Like a couple of the other Wingtree-made LICHICX silent linears, these too have a fairly average amount of equal magnitude N/S and E/W direction stem wobble that also has some cross-batch variability. What variation is present, though, is not overly significant.

Sound

Generally speaking, LICHICX-type silent linears tend to have firm, very highly muted bottom outs without much in the way of squishiness or gumminess that conventional silent linears do. That being said, though, these Berry Cheesecakes are surprising insofar that they have a noticeable, not overly problematic amount of such in each switch. With the lack of scratch noise, insulated heaviness of housing collisions, and the rest of their performance in line with expectations of the norm, this was a bit unexpected to encounter, even if relatively minor.

Context

Priced well around $0.40 per switch, available from a few vendors, and with somewhat cute looking design, these switches have a lot of outward appeal despite not much community attention due to other LICHICX-type silent linears/tactiles being more popular. I sincerely doubt these will be remembered at any point in the longer future of keyboard switch history.

Other

While I am glad we have not lost LICHICX forever in their closure, Wingtree's continued cranking out of such switches only makes ones like these less and less special…
