Geonworks Strike HE

Last Update: 10/11/2026

Geonworks Strike HE		
Switch Type: Clicky		*Co-Gain/XUDA*
31	/35	Push Feel
18	/25	Wobble
6	/10	Sound
11	/20	Context
6	/10	Other
72	/100	**Total**

Notes

Push Feel

The Geonworks Strike HE switches distinguish themselves from the vast majority of other click bar switches out there on account of both how relatively soft the breakthrough force is in the click bar as well as how gradually it builds up to that peak force. With good, thin factory lubing giving these switches a smooth approach, they really feel rounded, less sudden, and more gradual going up and down in stroke with perhaps the stereotypical polycarbonate over nylon housing collisions being the most jarring portion of their feeling.

Wobble

Equal in magnitude in N/S and E/W directions, the Strike HE switches have a reasonable amount of stem wobble that isn't likely to bother most users.

Sound

Describable as a quiet-for-click-bars 'tear drop' shaped sound profile, the click bars of the Strike HE switches have a thin, sharp high pitched portion and an engulfing, large amount of deeper, richer, and more complex tones toward the bottom end of their sound that, while being singular and not fuzzy, give the Strike HEs a rather complex sound. Unfortunately, though, across the batch of Strike HE switches tested there was a fair amount of variety in the shape of these profiles, with some coming across thinner, with a volume of sharp high tones that matched their deeper ones, or thicker, with the higher pitched, sharper ends being squashed entirely.

Context

Priced incredibly well for their performance and sheer niche as a clicky Hall Effect switch, these are available from a truly global supplier in Geonworks, though to what end? I sincerely doubt these have much of a historical shelf life due to anything other than novelty.

Other

In spite of all reasonable qualms about combining fixed mechanisms with changing actuation points, the Strike HE switches are at least somewhat uniquely made and appreciated for such.
