61	/100	Total

Notes

Push Feel

Despite being of “Oil King lineage”, the Oil King Silent Tactiles really feel like anything but that. Featuring a medium-soft tactile stroke that has a whole lot of linear pretravel, gummy housing collisions on account of a thinner version of classic stem silencing mechanisms, and a hilariously uncharacteristic lack of factory lube leading to a subtle scratchy feeling, these may as well be classic silent tactiles from 2014-2018 and not modern day reincarnations. About the only redeeming factors here are that they are fairly consistent from switch to switch and free from other of-era anomalies that we’ve not seen in years like crunch or spring ping.

Wobble

Present ever so slightly more in the N/S than E/W directions, there is a minor, likely unproblematic amount of stem wobble in these switches that is consistent across a batch.

Sound

While the Gateron Oil King Silent Tactile switches are somewhat silent on account of their dampening pads and medium-light tactile strength that doesn’t butt up against the leaves too hard, they are plagued by light grain scratching sounds and a softer, but still noticeable gumminess like conventional stem dampening mechanisms have.

Context

While the price of \$0.65 per switch may be “justifiable” on account of these switches using the same premium materials as the original Oil Kings, the price per performance of these as 2026 silent tactiles just plainly isn’t there. Lack of marketing and real acknowledgment of these by Gateron also makes me wonder how long they will continue to exist in the coming years.

Other

The Gateron Oil King Silent Tactiles have mechanisms that don’t make sense, do not meet clear market interest that Gateron has established, don’t leverage the main selling point of these switches, and abuse the legacy of Oil Kings as one of the most notable modern linears ever.
